Tim Thanks for the opportunity to look at the dryrott project at the Jason Lee middle school. After talking with the subcontractors, it appears this project will be above $80,000 to complete. I figured you would want to run that by the appropriate staff to see if that is exceeding the budget and we would be wasting the time it takes to file an official quote.

As per our discussion on site, I feel there is a much more efficient solution to the challenge that could be achieved by working from below the mechanical room and not moving any of the upper mechanical apparatus. That method would probably be in the area of $15,000 and not require permits. It would also achieve the same structural results and complete the repair in the same manner I have used on previous projects our company has completed.
Please let me know if there is any further discussion you would like to have on this matter.

Thank you,

Carl Hopple
